## Low Force Electronic Weld Heads

The SL-320A electronic **resistance spot welding** heads are high precision, low force heads designed specifically for applications requiring precise position and force control. This versatile series meets the process demands of microelectronics manufacturing, yet is robust enough to endure industrial requirements and environments.

### KEY FEATURES

- In-line and offset opposed electrode configurations to tailor weld head for application
- Exceptionally accurate force and position parameters provide outstanding process control and measurement
- Weld-to-displacement feature stops the weld precisely during collapse
- Initial part detection feature detects missing or extra parts
- Displacement limits facilitate monitoring of both initial and final part thickness
- Footswitch options: Linear motion or two level
- User friendly I/O for easy integration with PLC
- Four programmable relay outputs facilitate process control

### TYPICAL APPLICATIONS

*Squib wire*

*Wire to electrode*

*Electronic components*

*Hearing aids*

*Fine wires*

*Medical devices*
