

ADVANTAGES

- Achieves ultra low oxygen and moisture environment levels quickly
- Closed-loop gas circulation for decreased process gas consumption
- · Single push button automatic regeneration of filter media
- Quick glovebox integration using industry standard KF-40 flange connectors
- Modular, low profile design
- Single and dual column manual or automatic models

APPLICATIONS

- Ultra dry nitrogen or compressed dry air (CDA) welding environment for hermetic sealing electronic packages
- Recycling expensive glovebox process gas like argon while maintaining ultra dry environment conditions for laser welding applications like titanium, stainless steel and aluminum.

GP-500AGas Purification System

GP-500A is a 30 CFM standalone, automatic, regenerating, dual column inert gas purification system designed to continuously recirculate process gas from a glovebox through a filter column containing a mixture of oxygen and moisture getters. This closed-loop filtration process can achieve an ultra dry gas environment of about 1 ppm moisture and oxygen when integrated with typical AMADA WELD TECH Benchmark® gloveboxes.

GP-500A Plus has a 3.1 inch touch screen LCD display with built-in shortcut function keys which allows single button filter column selection or regeneration.

Also available in single and dual column manual configurations, the GP-500A's modular, low profile design means it can be easily integrated into most gloveboxes on the market.

GP-500A PLUS front panel interface

TECHNICAL SPECIFICATIONS

* Moisture and Oxygen	Moisture level: 3 ppm (-70 dp°C) typically expected after 3 days of operation	
	Oxygen level: 3 ppm typically expected after 3 days of operation	
Certification	on CE compliant	

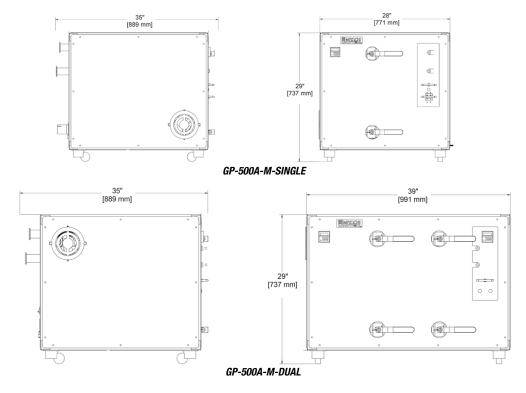

^{*} Absorption rate test was based on an empty AX5000 56" glovebox, absorption rate is expected to decrease when equipment is in the glovebox.

FACILITY REQUIREMENTS

Power	Single phase 208-240 VAC, 20 A, 50/60 Hz		
Regeneration forming gas	5% hydrogen 95% nitrogen (at least 270 cu ft / regeneration) 3/8" polyflow tube		
Regeneration purge gas	100% nitrogen or argon (at least 15 cu ft / regeneration) 3/8" polyflow tube		
Cooling water	12 to 30°C at a minimum flow rate of 1/2 GPM (1.9 LPM) 3/8" polyflow tube The installation area should be free of sudden temperature fluctuations and humidity should be ≤85% (non-condensing)		
Gas circulation port	NW40 flange x 2
