

WR Series

Resistance Welding Workstations

The WR Resistance welding workstations are designed with ease of use and reliability in mind.

Combining a power supply, weld head, process monitor and workbench, these compact workstations – designed to simplify welding tasks and maximize quality and reliability, while enhancing operator safety – are ideal for fast project startup.

KEY FEATURES

- DC inverter technology with up to 60,000 Amps provided on the secondary
- “Cascade” feature enables the use of one power supply with several workstations
- Integrate with either AMADA WELD TECH MH-1501 or KN-200A weld head providing fast follow-up allowing for complete metal fusion without weld splatter.
 - MH-1501 comes with integrated transformer that is sized for application and duty cycle. Electrode holders plumbed for water cooling.
- Optional weld monitor captures each and every weld and makes instantaneous comparison to known good reference. Alert when conditions fall outside of defined limits of the weld.
- Anti-tie-down buttons to safely initiate the weld cycle (foot switch optional).
- Adjustable electrode speed to facilitate safe handling and avoid damage to fragile parts.

TYPICAL APPLICATIONS

Copper electrical connections

Hot crimping

RF and hybrid devices

Automotive components

ENSURING MANUFACTURING SUCCESS WITH PROCESS MONITORING

Improve Quality • Reduce Downtime • Reduce Scrap

AMADA WELD TECH offers real-time process monitors for resistance welding, laser welding, micro TIG welding and hot bar reflow soldering. These stand-alone monitors are invaluable tools for product development, improving quality and throughput in production, and storing data for traceability.
